

Proposal & Quotation for AI-Assisted Development Tools

Submitted To	The Chief Executive Officer, Infoziant
Prepared By	A. Mohanaradha — Training & Placement Coordinator
Subject	Approval for two AI development platforms Claude Max and Cursor Pro — required to build and operate iPOMS internally
Nature of Request	Company-owned software subscription (not a personal reimbursement)

1. Purpose

iPOMS is an enterprise web application that digitises and centralises the organisation's entire placement operation, replacing the spreadsheets and manual trackers used today across coordinators, colleges and hiring partners. It will be built in-house and owned entirely by the company.

The entire technology stack is free or already available to us; this document requests approval for the only two paid items: **Claude Max** and **Cursor Pro**.

2. Why Claude Pro Is Not Sufficient — Plan Comparison

Claude Pro and Claude Max are the same product at different usage ceilings. Pro is sized for occasional use; our daily workload is continuous. The comparison below is based on Anthropic's published plan structure, where **Max gives 5× the usage of Pro per session** at the tier proposed here (a 20× tier exists at ≈ ₹24,000/mo, which is over-specified for our volume).

Parameter	Claude Pro — ₹2,399/mo	Claude Max 5× — ₹11,999/mo (proposed)
Usage per session	Baseline	5× Pro
Long working sessions	Limit reached within 1–2 hours of report or code work; work stops until the window resets	Supports a full working day of report generation plus development
Large data & documents	Multi-sheet Excel workbooks and long documents consume the quota quickly	Handles full college / batch datasets in one pass
Agentic / project work	Not practical — architecture and code work share the same small quota	Supports whole-project architecture, review and documentation runs
Fit for our workload	Insufficient	Recommended

Conclusion: Claude Max 5× is proposed for the one-month development window only — it is the lowest tier that covers a full working day of both operational reporting and software development. Once iPOMS Version 1 is delivered, the subscription is downgraded to Claude Pro, which is sufficient for routine reporting work.

3. How the Two Tools Work Together

The two subscriptions are not duplicates. Claude Max is the thinking and reporting layer; Cursor Pro is the code-writing layer inside the editor.

Claude Max — Architecture, Analysis & Reporting	Cursor Pro — Software Implementation
Requirement analysis, software architecture, database design, UI/UX and business-workflow planning	Frontend and backend development, component build-out, database integration
Technical documentation, code review, testing strategy, technical decision support	Debugging, refactoring, performance optimisation, repetitive code generation
Weekly and monthly placement insights, coordinator and college performance analysis, company engagement insights, executive KPI reports, management presentation content and professional email drafting	Applies to the development phase only — no operational role after Version 1 stabilises
Stepped down to Claude Pro after the build, which continues to support daily reporting and analytics at a fraction of the cost	Can be discontinued once iPOMS V1 is complete and stable

4. Subscription Duration

Tool	Term	Basis
Claude Max 5x	1 month Aug 2026	Development phase of iPOMS Version 1, alongside the daily college reporting workload
Cursor Pro	1 month Aug 2026	Coding phase only. Discontinued on 31 Aug 2026 — not renewed thereafter
Claude Pro (downgrade)	From 1 Sep 2026	Claude Max is stepped down to Claude Pro once development ends, and retained only until the campus placement training for the colleges is completed (expected October or November 2026, as per the training calendar)

5. Recommendation

Approve now	Claude Max 5x and Cursor Pro, one user each, for 1 August – 31 August 2026
On 31 Aug 2026	Cursor Pro is cancelled — no renewal and no further coding-tool cost
From 1 Sep 2026	Claude is downgraded to Pro at ₹2,399 per month for daily reporting and analytics
Review point	Claude Pro continues only until the campus placement training for the colleges closes — October or November 2026
Nature of spend	A time-boxed, self-reducing investment in a company-owned platform — not a software reimbursement

6. Quotation

6.1 COST BUILD-UP — PER TOOL, PER MONTH

Fee Component	Claude Max 5x	Cursor Pro
Base price	₹10,168	₹1,675 (\$20.00)
Add: 18% GST	₹1,831	₹301 + ₹59 forex
Monthly cost per user	₹11,999	≈ ₹2,035

6.2 QUOTATION SUMMARY

#	Item	Term	Rate / Month	Amount (INR)
1	Claude Max 5x subscription AI architecture, development support, business reports and analytics — 1 user	1 month August	₹11,999 incl. 18% GST	₹11,999
2	Cursor Pro subscription AI-assisted coding during the iPOMS build phase — 1 user	1 month August	≈ ₹2,035 \$20 + GST + forex	≈ ₹2,035
3	Claude Pro subscription — post-development Downgraded plan from 1 Sep 2026, retained until the campus placement training is completed	Per month from Sep	₹2,399 incl. 18% GST	₹2,399 / month
Monthly cost during the development phase (August, both tools)				≈ ₹14,034
Monthly cost from 1 Sep 2026 (Claude Pro only, Cursor Pro discontinued)				₹2,399
Total approval sought — development phase (1 month)				≈ ₹14,034

Note on extension: This quotation covers **one month** of Claude Max 5x and Cursor Pro (1 – 31 August 2026). If the development work needs more time, the same monthly rates continue to apply — ₹11,999 for Claude Max 5x and ≈ ₹2,035 for Cursor Pro, i.e. ≈ ₹14,034 for one additional month. The extension will not go beyond **one further month**: the development phase is capped at two months in total, after which Cursor Pro is discontinued and Claude Max is downgraded to Claude Pro at ₹2,399 per month.
